RYAN JOSE BROSAS

AI ENGINEER / AGENT SYSTEMS BUILDER

Building systems so everything doesn't need you.

AI agents and automation that do real work in production. Model-agnostic, and built on data that actually holds up.

// BUILD

TypeScript · Pydantic AI · Mastra · AI SDK · OpenCode · pi.dev

// MODELS

Claude · OpenAI · GLM · DeepSeek · Kimi

// SYSTEMS

RAG · MCP servers · n8n · Clay · HubSpot · Apify · PhantomBuster

SUMMARY

Somewhere in your workflow there are 20 hours a week that an AI agent should already be doing.

I build AI agents and automation that take that off your team every week. I have worked across design, web, support, marketing, and client delivery so I know how teams operate.

I got into AI by building. One day an **n8n** workflow clicked and I went deep on agents, prompts, and RAG. Now I build scrapers, research and outreach agents, and **MCP servers that run in production**. I do not lock into one model vendor so I pick the right one for the job.

But a good AI system is only as good as what is under it. I think a lot about data architecture, how it is structured, where it comes from, and how it flows through the system. That is what makes agents actually reliable.
